# Python List count() Method

List Methods

#### Example

**Get your own Python Server** 

Return the number of times the value "cherry" appears in the fruits list:

```
fruits = ['apple', 'banana', 'cherry']
x = fruits.count("cherry")
```

Try it Yourself »

## Definition and Usage

The count() method returns the number of elements with the specified value.

### **Syntax**

list.count(value)

#### Parameter Values

Parameter	Description
value	Required. Any type (string, number, list, tuple, etc.). The value to search for.
